Professional Summary

DevOps, Site Reliability Engineering (SRE), and Systems Infrastructure professional experienced in Linux administration, cloud technologies, automation, containerization, and networking. Backed by RHCSA, CCNA, and AWS certifications with a track record of deploying robust systems and architectures.

Technical Skills

DevOps & Platforms: Docker, Docker Compose, Kubernetes, Terraform, Jenkins, Ansible, Nginx, Git, GitHub
Cloud Computing: AWS (EC2, S3, Lambda, IAM, VPC, Security Groups, Deployment Automation)
Core Scripting & Systems: Linux (RHEL, Ubuntu), Bash/Shell Scripting, Python, SQL, JavaScript, HTML5/CSS3
Monitoring & Observability: Prometheus, Grafana, Metrics Collection, Infrastructure Monitoring, Alerting
Networking & Automation: CCNA Certified, TCP/IP, Routing/Switching, VLANs, Subnetting, DNS, DHCP, VPN
Frameworks & Databases: Flask, WordPress, WebSockets, Socket.IO, MySQL, Firebase

Professional Experience

Indian Institute of Technology Bombay (IIT Bombay)

Mumbai, MH

Project Technical Assistant

Jul 2024 – Present

- Designed a modular backend architecture using Python and Flask, improving core API execution and response times.
- Administered core laboratory systems and WordPress infrastructure to ensure high availability and security compliance.
- Containerized application workloads using Docker and configured multi-container systems via Docker Compose.
- Built and optimized automated CI/CD pipelines using GitHub Actions to streamline staging and multi-environment code deployment.
- Engineered real-time channels using WebSockets to smoothly stream telemetry data from hardware nodes and microcontrollers.
- Automated performance tuning and managed high-availability production workloads behind Nginx reverse proxies on Linux.

Projects

NeuroScan: Multi-Device Clinical Movement Assessment Platform — *Flask, Docker, BLE, Pi*

- Built a real-time data ingestion platform integrating Bluetooth LE hardware modules with system backends.
- Integrated MediaPipe framework for pose vectors and broadcasted low-latency tracking metrics over custom WebSockets.

SCAN Patient Information System — *Flask, MySQL, Firebase, JWT*

- Designed a secure records management framework using token verification pipelines and role-based validation hooks.
- Structured relational databases paired with asynchronous queries for administrative transaction tracking logs.

Spot Sense AI: Smart Parking Management System — *Python, OpenCV, Flask, SQL*

- Developed an automated vision pipeline using OpenCV for alphanumeric validation logs against relational storage tiers.
- Created event-driven email alerting structures mapped explicitly against live multi-client transaction loops.

Education

Guru Nanak Khalsa College, University of Mumbai

Mumbai, MH

Master of Science (M.Sc.) in Information Technology (CGPA: 7.0 / 10.0)

2023 – 2025

University of Mumbai

Mumbai, MH

Bachelor of Science (B.Sc.) in Information Technology (CGPA: 9.45 / 10.0 – Distinction)

2020 – 2023

Certifications & Core Competencies

Certifications: Red Hat Certified System Administrator · Cisco Certified Network Associate (CCNA) · AWS Certified Cloud Practitioner

Core Competencies: Site Reliability Engineering (SRE), Infrastructure as Code (IaC), CI/CD Pipelines, Infrastructure Observability, System Deployments, Network Security Policies, Technical Support Automation
